COVID-19 Vaccinations in Missouri

3.

This dashboard was last updated on 12/28/2021 and contains data on vaccinations adminstered through 12/26/2021. Historical numbers, especially over the most recent few days, will update as providers report data to the state. Differences between this dashboard's numbers and those on CDC's dashboard are primarily due to timing.

Where Do Vaccinated Residents Live?

Note: Some recipients of Missouri vaccines list their address as in another state. They do not appear in this county data, so the county data will not add to total doses administered. Additionally, county data will only be available below for recipients whose address information is known. Due to the Johnson & Johnson vaccine counting as both initiated and completed, the sum of the COVID-19 Vaccine Regimen Initiated column and the COVID-19 Vaccine Regimen Completed column will not match the COVID-19 Doses Administered column.

The state tracks COVID-19 trends using jurisdictional boundaries of local public health agencies. Most of the data is broken down by county, with Joplin, Kansas City, Independence and St. Louis City — where data is only representative of the city — among the exceptions because the cities have their own local public health agency.

Additionally, not all vaccines administered in Missouri through federal programs are reported to Missouri DHSS. This includes but is not limited to those administered on military bases, by Veterans Affairs and other federal agencies, some federally-qualified health centers and some federal retail pharmacy program partners. Vaccines administered out-of-state to Missouri residents are also not reported.

CDC Vaccination Data can be found here.
